The graph shows the number concentration $n(D)$ (cm$^{-3}$) as a function of dry diameter $D$ (µm) for different time periods:

- Dotted line: 1 hour
- Black line: 24 hours
- Dashed line: 5 hours
- Black line with dots: 24 hours, no coag
- Dotted-dashed line: 7 hours

The concentration is plotted on a logarithmic scale ranging from $10^1$ to $10^5$ on the y-axis, and the dry diameter ranges from 0.01 to 1 µm on the x-axis.
